R & D Engineer

We are looking for a creative mechanical/design engineer with a degree from an ABET accredited university to become part of our research and development team.

Members of our research and development team are expected to do just as the name suggests – research and develop the next generation of designs and products that will allow us to remain one of the truly cutting-edge companies in our industry.

You will be provided the tools and direction to learn the engineering and design processes. You will also be given the freedom to show off your creative talents.

If you think you’ve got what it takes, send us a resume showing us why you would be the best candidate.

Welker’s reputation as a leader in our industry was earned through dedication to being the best. “Good enough” just isn’t. We expect more, and provide a fun, relaxed work environment to encourage your best effort.
