Pre re quisite (s)	quantities and processes in heat transf Theory is applied to the analysis and other applications. Where appropriate Math 222 – Differential Equations ME 304 – Fluid Mechanics	er using idesign of	numerical methods. heat exchangers and						
Prerequisite(s)	Theory is applied to the analysis and other applications. Where appropriate Math 222 – Differential Equations ME 304 – Fluid Mechanics	design of	heat exchangers and						
Pre requisite (s)	Math 222 – Differential Equations ME 304 – Fluid Mechanics	, compute	er simulation is used.						
Prerequisite(s)	ME 304 – Fluid Mechanics								
l l	ME 311 Thermodynamics I	ME 304 – Fluid Mechanics							
	ME 311 – Thermodynamics I								
Required, Elective or	Required								
Selected Elective									
Corequisite(s)									
	None								
Required Materials	Frank P. Incropera and David P. DeWitt An Introduction to Heat								
	Transfer, 6th edition. John Wiley & Sons 2012								
Other supplemental	Computer software available from the textbook and ME CAD room								
materials	and other sources.								
Computer Usage	Use existing software to solve practical heat transfer problems as								
	demonstrated in the project reports.								
Course Learning	1. mathematically describe	1, 3, 4	Homework (80% o						
Outcomes/expected	different practical heat transfer		the students will earn						
performance criteria:	problems including governing		a grade of 70% or						
	equations together with boundary		better)						
	and initial conditions								
	2. solve the heat transfer problems	1, 2, 4	Home work (80% o						
	for a range of practically important		the students will earn						
	simplified configurations and		a grade of 70% or						
	symmetries, including one-		better)						
	dimensional problems in cylindrical								
	and spherical coordinates								
	3. use generic data processing	4	Homework, Project						
	software to solve heat transfer		(80% o the students						
	problems		will earn a grade of						
			70% or better)						
	4. apply finite difference methods	2,5	Homework (80% o						
	for transient heat transfer in a solid		the students will earn						
	with or without distributed heat		a grade of 70% or						
	sources		better)						
	5. describe engineering heat	6	Homework (80% o						
	transfer problems using non-		the students will earn						

	1						- 1£ (5	1 0/			
	:	dimensional criteria, such as a grade of 65% or						% OF			
		Reynolds number, Nusselt number, better)									
		Rayleigh number, etc									
	6. deter	6. determine engineering design 2, 4 Homework, Project									
	quantitie	quantities (power, requirements, (80% o the students									
	insulatio	insulation thickness, thermal will earn a grade of									
		conductivity, exchanger size, etc.) 70% or better)									
		required for design of thermal									
		engineering devices and systems									
	_ engine en										
Class Topics	1. I	1. Introduction to heat transfer									
	1	2. Introduction to conduction heat transfer									
		3. Steady heat conduction problems									
		4. Fins, common fin shapes and models									
		5. Quiz 1: steady conduction heat transfer, fins									
	:	6. Intro to transient heat transfer problems, lumped system									
	:	7. Transient heat transfer in solids: analytical solutions									
		8. Steady heat transfer: numerical analysis									
	9. Transient heat transfer: numerical methods										
		10. Quiz 2: transient heat transfer									
	:	11. Heat transfer design project: introduction									
		12. Introduction to convection heat transfer									
		13. Forced convection, external/internal flows									
	:	14. Natural convection									
		15. Quiz 3: Convection heat transfer									
		16. Solving practical radiation heat transfer problems									
		17. Heat Exchangers 18. Introduction to radiation									
			on to rad	ation							
		19. Review 20. Comprehensive Final Exam									
	20. 0	Comprehe	ensive Fir	al Exam							
Student	SOs*	1	2	3	4	5	6	7			
Outcomes (Scale: 1-3)	Scale	3	3	2	3	1	3				
		_	-		_	I	1 -
